# **THE MANIFESTO OF THE NATIONAL RESCUE MOVEMENT, NRM**

## **CHAPTER ONE**

### **PREAMBLE**

#### *a. INTRODUCTION*

The goal of every responsible government is to provide for the well-being of the nation's citizens. Successive governments of the country have tried to achieve this goal but have all failed. Nigeria has been in prolonged crises since independence in 1960. The country has survived one major civil war and many other civil challenges that have been continuously moving from bad to worse. Today, in Nigeria, the country is more divided along ethno-religious lines, more than before. The current situation, made more acute by an increasingly aware populace and the modern tools of communication, has continued to create the impression that the leadership of the Nigerian nation in all aspects of life lacks the sincerity or capacity to change the situation and help the Nigeria people out of this shameful quagmire. The Nigeria people are disillusioned about the way they are governed and how their collective fate has been compromised by a tiny clique of selfish, greedy and grasping fellows. They continue to struggle vainly to make sense out of their lives. Frustration and desperation have now become the lot of our people from all around the country, both the high and the low.

With all the resources and the huge potentials of this perpetually potential great nation, Nigeria has serially underperformed. The problem is simply and squarely, leadership. The interest and welfare of the people have not been the center piece of successive governments. Therefore, if something is not done urgently, the country may degenerate into a failed state where the entire people will be faced with chaos, anarchy and the possible disintegration of the country.

#### *b. THE INSPIRATION*

In view of this, there is an urgent need for the conviction and committed efforts of some people to save the country from this sad and gory fate, and put her back on the road to visible and sustainable recovery. It is this conviction that has inspired the formation of the National Rescue Movement, NRM, with the sole purpose and plan to make the entire Nigerian people the focus and centre of governance and the central focus of every other human, social and communal activity in the nation. The National Rescue Movement, NRM, has identified the reasons for the failure of past governments and is totally committed to achieving a united,

stable and prosperous nation in which all citizens are entitled to quality life based on the inviolable and irresolvable principles and policies founded on the collective interests of the Nigerian people. This is the passion that can steer the ship of the Nigerian state away from destruction and back on to the path of sustainable national peace, productivity and prosperity under the guidance of Almighty God. The NRM therefore shall:

- i. Build a nation where government and the citizens shall be partners in progress in the quest for the economic well-being of the entire country
- ii. Promote the recognition of the democratic rights of every citizen
- iii. Ensure that public utilities which are required for the rapid development of Nigeria are functional and efficiently run
- iv. Adopt a realistic approach to the management of Nigeria's immense resources
- v. Continually guarantee the security of the nation, as well as the life and property of her citizens.

*c. SUPREMACY OF THE CONSTITUTION*

The NRM believes in the supremacy of the Constitution of the Federal Republic of Nigeria which guarantees democratic and constitutional governance. It also believes that, in addition, the provisions of the Constitution of NRM shall have supremacy over any person, provisions, rules or regulations of the party. To this end, the NRM shall uphold the rule of law at all times to ensure

- i. Equality of every citizen before the law.
- ii. Respect for the fundamental human rights of every citizen as enshrined in the Constitution.
- iii. That elected and appointed leaders of the NRM promote and defend the Constitution and the Federal system of Nigeria government to safeguard the treatment of every person fairly and equitably, irrespective of his social or political status, gender, religious belief or ethnic origin.

*d. Philosophy of NRM*

The NRM is totally committed to the economic independence and a fully democratized Nigeria. This commitment is necessary because Nigeria has faced several years of economic and political turmoil. The NRM shall therefore ensure that:

- i. Democracy as a form of government is entrenched, institutionalized and sustained.
- ii. Attain political power through democratic and constitutional means for the purpose of creating socio-economic conditions in which the productive energies of individual citizens and corporate groups are enhanced and utilized for national development<sup>1</sup>.  
Declaration of state of emergency on agriculture.

- iii. Promote participatory democracy at all levels of the government in the belief that sovereignty belongs to the people from whom government, through the Nigerian Constitution, derives all its powers and authority.
- iv. Promote peace, order and good government whose primary responsibility shall be the welfare and security of all citizens founded on the principles of freedom, equality and justice.
- v. Inculcate decent, selfless service and patriotic culture in Nigerian politics and establish a true democratic government where respect for the rule of law, equity and social justice prevails.

## **Chapter Two**

### **Provision and Maintenance of Infrastructure Policy**

#### ***Power Supply***

As a major oil producing country of the world, Nigeria should feel ashamed for failing to avail her citizens adequate electricity supply. In fact, power failures have been one of the major causes of the present economic recession affecting the nation.

Because electricity power supply is unreliable, erratic, and largely unavailable, industries cannot operate effectively and profitably. Consequently, workers are retrenched as businesses and factories downsize, rationalize or close down.

Furthermore, these constant blackouts have had the effect of militating against efficient performance in private and public offices as millions of executive man-hours and billions of naira, are wasted due to power outages. This avoidable and colossal national loss which has become a protracted shame to all right-thinking Nigerians is as a result of inexcusable dereliction of duty on the part of various successive governments.

The NRM on assuming power at any point, particularly the center, will immediately take prompt measures to eliminate power failure throughout the country. This it shall achieve by:

1. Improving the efficiency of power supply from Kanji, Shiroro and other Dams, while making renewed efforts to fund research into and accelerate the development of other sources of generating electric power like gas, diesel, coal, solar, wind, waste, biofuel

among other modern sources, with the aim of ensuring that more Nigerians have access to electricity supply.

2. The NRM shall build in every region more power stations and infrastructure that are capable of generating and supplying electricity to every state and community within it using the hydro-power plants that would be supported and augmented by other sources in the short run or the long run depending- on efficacy and cost advantage.
3. The NRM-led federal government will actively assist state administrations to expand the scope of rural electrification so as not to leave out any community across the country from enjoying cheap and available power supply.
4. For greater efficiency, the power management structure of Nigeria would be decentralized to encourage capacity building and professionalism by creating different organizations that will handle different policies and projects like power generation, distribution, marketing, policy management e.t.c., with affiliated quasi autonomous regional and district based offices.
5. Gas which the government and stakeholders have been wasting across several decades in the past through the dangerous process of flaring shall immediately be stopped. A technical team shall be put together and empowerment to look into how this resource could be optimally explored for electricity purposes to the benefit of our people before it is considered for export.
6. Overall, the party shall ensure the downward review of electricity bills' by vigorously pursuing the smooth and transparent completion of the privatization of generation, transmission, and distribution of electricity in the country, thus encouraging investors to openly and honestly participate in power management and embark on multiple sources of providing energy for our people which may not leave out the nuclear option after-serious consideration of the desirability and safety implications.

## ***TRANSPORTATION AND HAULAGE***

### ***Railways:***

Before the railway was allowed to go broke, the railway system used to be the engine room for the movement of people, goods and services across the country. Several years of mismanagement has seen the critical national infrastructure system go to pieces. The NRM government will:

1. Review existing plans to rehabilitate and expand the railway system.

2. Immediate steps will be taken to replace the present narrow-gauge rails with standard ones.
3. The extension of rail lines to service the growing demand for haulage of goods from industrial and commercial centres in the country.
4. The Railway Corporation will be provided with more modern, more commodious and faster rolling stock while remarkable intervention in the areas of modernization where electric coaches and cars shall be introduced into our rail system.

The resultant transfer of haulage from roads to rail will make for greater and cheaper mobility of goods, and relieve our roads of much of the present heavy duty vehicles, trailers and other road traffics, and thus make the roads safer for lighter and passenger traffic.

### **Roads**

Lack of adequate and effective maintenance is a major factor in the rapidity with which our roads deteriorate and collapse within a very short period of their commissioning. A factor in this deplorable situation is of course traceable to faulty road design in which provision is often not made for drainage. There is also the indifferent execution of road design by contractors. The NRM government shall:

1. Ensure the regular maintenance of the road networks within its jurisdiction and areas of operation.
2. As regards maintenance, an effective system of road maintenance will be set up in a bid to prolong the lives of existing roads.
3. The construction of feeder or farmer's road to aid integrated roads for rural development programme as an important part of the party's road development programme all over the country.
4. Encourage the emergence of Nigerians and Nigerian Companies fully capable of designing, building and maintaining the type of roads appropriate for our own geographical and environmental conditions. The, NRM shall spare no effort in creating the conditions for the emergence of such Nigerians or of such Nigerian companies and organisations.

### **Waterways**

The NRM will

1. Emphasise the development of efficient waterways as a complement to the development of other types of transportation in the country.
2. Dredge, develop and sustain inland waterways
3. Convert Nigeria's large rivers and coastal lagoons and creeks into waterways.
4. Install and develop facilities at river ports to upgrade their capacity for handling the movement of heavy industrial goods.

### **Airways**

The NRM shall ensure a sound air transport system in Nigeria by;

1. The priorities of a national airline will be re-visited and reconsidered so that such national carrier may be able to play a more significant role in the process of national integration and international competitiveness. Commercial viability will be the key in determining these considerations
2. The development of internal routes linking the major centres of population and commercial activities will be high in the order of priority.
3. Upgrade facilities at all airports in the country so they could meet international standards.
4. Existing airports will be modernised and new ones built in the major centres of population to be served by the national airline and other private sector players. NRM will encourage competition by indigenous private or state-owned carriers. Such competition will enhance the quality of service enjoyed by the travelling public. The training and adequate remuneration of air pilot, cabin crew and other support staff will be improved upon within the aviation industry.

## **COMMUNICATION AND INFORMATION MANAGEMENT**

### ***Telecommunication***

The NRM, on coming to power at the centre, will immediately speed up the decentralization process of the interest of the government so as to make for greater operational efficiency and commercial profitability of public investment in the telecommunication sector.

The telephone network in the country is not good enough. The NRM is determined to improve the telecommunication system and will encourage the workers who are presently

toiling under some of the worst service condition in the country not only in the country, but in the world.

The overriding objective of the party will be to increase radically the quantity and quality of telecommunication services in the country so as to accelerate social, commercial and sundry interaction and interface. The party shall thus provide for an era of greater time for the people, free from the strain of traffic jams and other slow-downs which will not have been the case but for the unavailability of efficient telecommunications services, to do other things that are important in their lives,

### ***The Web***

The world has become a global village and any society that does not take advantage of this opportunity will only find itself in the dust heap of history. The NRM government therefore shall do everything in its powers to make the internet service available to the majority of the Nigerian people on the one hand, and necessary infrastructures shall also be put in place to make the people, both old and young digitally literate to take advantage of this growing opportunity.

The leadership of the National Rescue Movement is cognizant of the fact that the future belongs to the digital world and any reluctance on the part of those in authority to take due advantage of this reality is to compound the development crises that has frustrated the fortune of Nigeria and Africa. The Nigerian people and the nation cannot afford the luxury of the blissful and retarding ignorance.

### ***Postal Services***

An immediate solution will be found to the problem of inefficient management of our postal service system. Modern facilities for collecting, sorting, dispatching and distribution of mails will be brought to bear on the operations of this very important social service to ensure that every inhabited area, whether urban or rural, is effectively covered by postal services.

## **Water supply**

Water is too basic a human need that it should be available in every home and institution in sufficient quantity and quality. If we are voted to federal power, we shall provide funds for the study of all available water resources in the country. This is with the view to embarking on a nation-wide programme of ensuring that every citizen gets clean and adequate water supply.

Besides, the party's integrated development programme lays great emphasis on the improvement of the quality of life in all areas through, among other schemes, the provision of adequate water supply to the citizenry.

Therefore, from whatever angle one may look at it, the fact must remain that water, as an indispensable factor of life will flow everywhere in the federation when the RM comes to power at the centre, or in any state that the party is voted into government.

## **HOUSING**

An NRM federal government will review the land issues across the country including Abuja and environs and come up with sustainable plans, policies and programmes that will solve the housing challenges of the people; this will be done with a view to ensuring that the masses of our people are the primary beneficiaries of these government facilities.

Furthermore, various housing programmes will be implemented in such a manner that no citizen will be required to live with his family in one room cubicles. Every effort will be made, in conjunction with the private sector, to provide spacious, comfortable and humane housing for every family in Nigeria.

## **Chapter Three**

### **Security and Social Stability Policy**

Today, the dangerous problem of insecurity and social instability in the country has assumed a frightening dimension. The Nigeria Police, other security agencies and the entire citizens in general, who have become improvised security officers, appear to be overwhelmed by the multifarious security challenges besetting and assailing our nation. Regrettably, governments at all levels seem to have lost the capacity to curb the menace of insecurity of persons and

property across the country. The society is getting increasingly besieged by all kinds of criminalities. Insurgency, terrorism, Kidnapping, drugs, frauds, assassinations, ritual killings, cult activities, banditry, kidnapping, bunkering, embezzling, hooliganism, prostitution, impersonation and other vices are on the increase daily with renewed vigour, and the real fear is that the rise in criminality and the apparent helplessness of current leadership in governments portend a speedy descent of the country into anarchy, and a threatening complete breakdown of law and order. Certainly, it has become extremely urgent and very important that all concerned and well-meaning individuals and organizations as joint stakeholders in the development of the society must rise up to support the National Rescue Movement so that the party can immediately, proactively, creatively and enthronement of a safer and more stable nation through ingenious and indigenious security management plans. The NRM is clear that development is the foundation of the collective aspiration of every nation, and security, the ground of progress without which the foundation cannot be built. We are determined to enhance the speedy realization of this crucial objective by devising strategic ideas and insights to critically and ingeniously address the problem of insecurity in an integrated way to improve and sustain the stability of the society in the following areas of security operations.

***Personal Security:*** This area has to do with the safety and security of the life, well-being, and tangible and intangible properties of an individual.

***Organisational Security:*** This has to do with safety and security of tangible and intangible properties of an organisation, a corporation or any establishment whatsoever including the lives and Well-being of all relevant stakeholders who are affected by the operations of the organisation in question, and this covers the internal, medial and external publics.

***Socio-communal Security:*** This is about the Welfare, safety and security of lives and properties within a given community including social and infrastructural services which ensure social stability and the effective prevention and curtailment of ethnic conflicts.

***National Security:*** This simply has to do with the maintenance and assurance of peace and stability within a nation, the protection of the nation's territorial integrity from internal insurgencies and external aggressions, and the defence of the freedom of the nation's sovereignty from any political, economic or military intervention or interference.

***Global Security:*** Global security must be the interest of any responsible government the world over because crises and conflicts have a Way of growing beyond their borders if they are not nipped in the bud. It is therefore the intention of our party to effectively contribute to the movement and initiatives to make the world safer for every man, woman and child as

much as possible. If adopted by all the nations of the world, this is the policy that can ensure universal stability, equilibrium and prosperity. Without this involvement, Nigeria cannot assume her proper place in the comity of respectable nations.

These security realizations also have some operational dimensions that would guide our efforts to transform the security situation in the country as outlined.

1. ***Security as an enforcement issue:*** The party shall take compassionate care of the law enforcers and give them similar or even better treatment than their contemporaries are getting in developed countries.
2. ***Security as a political issue:*** We shall summon the courage required to redress Insecurity in the country rather than profit from it like in the current situation.
3. ***Security as an academic issue:*** Researches at formal and informal level (schools and institutes) shall be encouraged to give answers to the challenges facing security management in the country.
4. ***Security as a social issue:*** Social nets, social structures and infrastructures shall be created in the form of plans, programmes and policies that will take care of the people and discourage them from going into crime to survive.
5. ***Security as a religious issue:*** Religious fundamentalism and their various social implications shall be critically reviewed and proper efforts made to address them,
6. ***Security as an international issue:*** NRM is conscious of growing international terrorism, cross border threats, border disputes and interstate conflicts etc. It would be the concern of the party to ensure adequate and water tight security within her own borders while contributing to the maintenance of the interdependence equilibrium of nations of the world.
7. ***Security as a legal issue:*** Justice Administration and arbitration shall be henceforth given all required support to expedite court processes, equity, integrity and impartiality so as to make the justice system in the country part of the solution to security management instead of remaining part of the problem.
8. ***Security as economic issue:*** Economic activation of the society and the empowerment of the people is sine qua non to safe and stable societies. It is the situation of extreme and excruciating poverty that is prevalent and pervasive in the country that has further fuelled and fast-tracked the occurrence of personal, organizational, communal and national insecurity in the country. On assuming office at any level, the NRM shall make macro-economic activity the basis of generating micro economic prosperity as a sure way of guaranteeing socio-economic stability. Rather than continue with the futile, mindless and

unabating militarization of the Nigerian society, the NRM shall come up with creative solutions to take care of the problems that are confronting our people,

9. **Security as an information issue:** Security education, information and communication within and between different publics and stakeholders in the country shall be embarked upon to redress the insecurity in the nation.

10. **Security as a media issue:** Conscious efforts shall be made by the party to integrate the media in the area of effective management of public security information and reportage.

11. **Security as logistics issue:** The National Rescue Movement is aware of the difficult and indeed hazardous operational situation within which the security agencies work and function. We continue to blame the security personnel for performing below par when various governments in the country persistently refuse to kit and equip them with the necessary tools and gadgets that they need to function. It is a sad testament that Nigerian governments run 19<sup>th</sup> century security outfits in a 21<sup>st</sup> century society. Our party shall therefore make committed efforts to upgrade the facilities and work conditions of the security sector in all relevant areas including Communication, Transportation, Administration, Operation, Cooperation and Protection.

12. **Security as development issue:** In any society with stagnant or sometimes, worsening development profile, the first casualty is security and the eventual casualty is stability. In this wise therefore, the RNC shall expedite and accelerate its sustainable integrated development schemes across, the nation as a viable and highly potential development bloc.

13. **Security as a cultural issue:** Because of overwhelming and suffocating poverty. Nigerians have completely disconnected from their cultural ethics and expectations. And have lost the moral virtues and values that guide and guide individual conducts and social behaviours. Conscious efforts shall be made to inculcate, engrave on the heart of the entire citizenry and to bring back to life our past lofty and glowing social mores and morals at home, in school and at work so that the glory of the nation that has taken to flight can be recovered.

14. **Security as a national emergency issue:** It is no longer acceptable both to the NRM and the entire people of Nigeria that the lives of our people are constantly put in danger through incessant communal hostilities that have wasted a lot of lives across the country. Our party shall put necessary machinery in place to ensure the absolute, or in the least the immediate reduction to the minimum the occurrence and conditions that are firing and fostering mutual communal hostilities.

15. ***Security as a natural emergency issue:*** Utmost and non-negotiable premium shall be placed on the lives of our people putting plans and programmes in place in anticipation of social and natural emergencies like fire, flood, famine, etc.

***Security Addendum:*** The way forward is for all concerned, compassionate and committed Nigerians to, in support of the National Rescue Movement, rise up to the dire challenge of the security situation in the country and devise ways that all the dimensions of security management could be systematically and strategically interlinked and brought together in relation to the areas of security operations to resolve the security threats and the attendant social volatility that is currently prevalent in the country.

NRM is committed to respond creatively to the failure of security in the land. We will support strengthening the states and local governments to provide community policing for their jurisdictions while also strengthening the country's Federal Security Institutions. More specifically, the NRM shall do the following:

- \* Establish a National Security Commission with members drawn for all states to coordinate the nation's security.
- \* Convert existing Federal Road Safety Commission to Federal Transport Police (FTP) with full empowerment to protect life and property on the roads, rail-lines, Waterways and airports as this has become a specialized subsector worldwide: This will free the Nigeria Police to focus on the very serious areas of personal, organizational and communal safety and security of lives and properties.
- \* Organise regular stakeholders' summit on security of life and property to include federal, state, and local government leaders, trade unions, professionals and captains of industry and the business community to make recommendations on needed reforms in the nation's security sector.
- \* Strive to implement the United Nations recommendation of one policeman to 400 citizens.
- \* Introduce minimum of OND to qualify for entry into the police force
- \* Ensure that police training meet international standard
- \* Complete overhaul of the prison system to restore the original purpose of the correctional system.

## ***Law and Justice Administration***

The NRM will do everything within the country's constitution in order to uphold and reinforce the independence and integrity of the judiciary.

Due to the interference by political functionaries, the judiciary has suffered immeasurably in the hands of unpatriotic leaders and the reputation of the sacred temple of justice has been seriously violated and impugned upon.

The first and primary concern of the NRM on assumption of office will be the restoration of the dignity and integrity of the justice system through the granting of constitutional autonomy and required empowerment that is needed for the courts to deliver unbiased and objective non-partisan judgments.

Every effort will be made to build more court houses and attract qualified lawyers to the bench in a way to ensure that justice will stand a chance of speedier dispensation, and be within the reach of every citizenry. The conditions of service of judicial officers will be greatly enhanced to attract quality personnel to the Bench, and decongest the schedule of the judges.

## **Chapter Four**

### **Agriculture and Rural Development Policy**

#### ***Agriculture***

The NRM shall diversify the economic base of the country and Agriculture shall feature prominently on the such plans. The glory days of agro-allied products will be brought back Such crops as cocoa, cotton, groundnut, maize, palm produce, rubber, yam, rice and others shall be given attention to achieve food sufficiency for the nation. To this end, the NRM government shall establish the Agriculture Revitalisation Programme and will pay special attention to the following:

1. Declaration of state of emergency on agriculture.
2. Operational involvement of all individual, cooperate, governmental and non-governmental stakeholders.
3. Initiation and encouragement of massive private sector Participation.
4. Origination and conception of creative ideas by relevant stakeholders.

5. Inauguration of operational task group on agriculture.
6. Facilitation of integrated ownership scheme.
7. Development of economy of scale processes.
8. Origination of Agricultural Development Architecture.

Focus of agricultural development shall include:

1. Introduction of all-seasons land cultivation.
2. Water cultivation.
3. Agricultural business Units.
4. Agricultural Cooperative and micro Finance Scheme.
5. Trans-Border Initiatives.
6. Regular Agricultural Roundtable for review and facilitation of the agricultural sector.
7. Adequately fund the River Basin Development Authorities so they could promote irrigation agriculture.

Special attention will be paid to the danger of the encroaching Sahara Desert. Pragmatic re-forestation schemes will be introduced as a matter of urgency to stem the invasion of sand upon our territory. Down South, the menace of soil erosion will be halted through planned flood-fighting measures, as also by the application of methodical forestation techniques.

Our water resources will be optimally harnessed throughout the country so that the soil of our beloved fatherland may produce plentiful food for all. This is because the NRM believes that the promise to end hunger permanently must of necessity imply that there has to be sufficient food for the masses to eat today and plenty more left for tomorrow. This we promise to do nationally if voted into power at the federal level.

Finally, the NRM wishes to declare in all solemnity that we regard agriculture as the indispensable foundation upon which all development should and would be built in Nigeria. Without a comprehensive, implementable and sustainable revitalisation of the agriculture sector, all other development schemes including petroleum, mining, will yield no lasting benefit the nation. This is the sole reason the National Rescue Movement is making the subject of agriculture the bedrock of its integrated socio-community development agenda.

## **Chapter Five**

### **Petroleum Resources and Solid Minerals Policy**

#### *Petroleum Resources*

##### **The Downstream Sub-sector**

The treacherous politicking of the downstream sub-sector of the petroleum industry shall become a thing of the past as the NRM government on assumption of office shall overhaul the sector to further empower the managers of this industry to make them productive and responsive to the expectations and yearnings of our over-labored people.

It is the compliance and complicity of the political leadership across all sectors of Nigeria's national life that have rendered the nation entirely redundant and comatose. With good leadership, Nigeria will be up and doing. Consequently, efforts would be made to fully resuscitate, reactivate and upgrade all the four refineries that are presently working below installed capacity and are at other times at worst out of service.

In the event where these facilities are hopelessly derelict, and are unserviceable, new ones shall be proposed, planned and built with the aim of stopping forthwith the importation of refined petroleum products into the country. Interested and capable Nigerians shall be encouraged and given all necessary support to look inward and solve the problem of recurring fuel scarcity and petroleum subsidy scam once and for all by producing locally what are being imported at exorbitant cost to both the people and the nation.

## **Chapter Six**

### **Health Policy**

#### *Preventive Health Care*

#### *Curative Health Care*

#### *Health Personnel*

#### *Trado-Medical Services*

#### *Care of the Disabled, Handicapped and Aged*

## **HEALTH AND MEDICAL CARE**

The state of health in the country is daily ebbing away and federal and state government are not appreciative of the fact of old saying that "health is wealth". This non-chalant attitude reflects in the inadequate deployment of good health services to the citizenry.

Indeed, most of the nation's health schemes and facilities have been derelict, and there is no functional and accessible health and medical care to take care of the medical need of the people.

The NRM government if elected at any level shall not take the individual well-being, health and lives of our people for granted. We shall do everything possible to stop the situation where fellow Nigerians undergo medical deprivation and suffering because they cannot get appropriate treatment for the ailment and health condition they are going through due to lack of funds. NRM-led government at any level shall:

Immediately embark on preventive medical services to reduce the exposure of our people to diseases and other medical conditions more so in areas of preventable illnesses through enlightenment programmes, immunization services, and sanitary campaigns and facilities provisions.

This will be complemented by comprehensive health insurance schemes to cater for the curative health needs of our people. Health care will no longer be for the rich alone and the Nigerian people will not die cheaply from minor sicknesses. The NRM government shall embark on the following specific actions:

1. Make qualitative health services available to the generality of our people through Comprehensive Medical Insurance Scheme, and those who cannot meet up their obligation shall become the responsibility of government until they can take up the responsibility. Those in this category include the children, the elderly, the unemployed, and physically and mentally challenged.
2. Attention shall be given to all areas of medical service including primary health delivery covering personal, community, environmental and sanitary health. This shall be coordinated in each local government area by functional general hospital located Within the LGA area, while PHC shall be established in each Ward.
3. There shall also be one state-of-the-art hospital having facilities for specialist training and research services in each state.
4. Major comprehensive medical facilities shall also be built across the country to be evenly distributed so as to make it almost completely unnecessary for leaders to continue to jet out of the country for medical treatment while they leave the citizenry to the gory and sad fate of inadequate health service.

5. Private hospital shall be encouraged and incentivized to augment and complement the efforts of government of all areas of operation
6. Medical personnel shall be fully catered for as their interest including-training, certification, remuneration and other conditions of service shall be well reviewed and improved upon to encourage them and dissuade brain drain that has always been the case till now.
7. Composite effort shall be made to bring together, standardise and harness the wonderful efforts of our traditional medical practitioners who have been meeting the needs of our people well before now.
8. The practice of traditional medicine shall be critically and deliberately looked into with the aim of modernizing and standardising the practice for local and international use like their foreign contemporaries do.
9. For the purpose of equity and availability of medical services, no state or local government shall have more than the recommended number of medical facility unless all other states and Local Government Areas within the control of the party have been adequately taken care of.
10. NRM will begin the implementation of the free health care scheme which will constitute one of the cardinal programmes of the party. The curative and preventive medical needs of the people in some life-threatening ailments will be taken care of free of all charges.

At that same time, pre-natal attention will be given free to all women. Child delivery will attract no charges. Surgical operation, accident and emergencies cases and all diagnosis and prescription will be made available to all citizens as free services.

The NRM will resuscitate the free health care programme in all parts of the country. Functional and comprehensive health insurance scheme shall be closely considered.

The training of Doctors and other medical personnel will be intensified so as to ensure that a high level health status and medical well-being is maintained throughout the country.

Moreover, doctors will be encouraged to undertake specialization programmes and refresher courses that will put them on the same standing with their colleagues around the globe.

Exchange programmes will also be arranged in other to foster a regular inter change of professional and research experiences at `international levels. This, in turn will discourage the practice by some Nigerians to seek medical treatment abroad.

## **CHAPTER SEVEN**

### **EDUCATION AND TECHNOLOGY**

Education has assumed its worst element in the history of Nigeria since independence and there is no need to continue to flog a dead horse by itemizing the disappointments and shortcomings that are very obvious throughout the entire Nigerian life today in the area of education. It is therefore sufficient to go straight to the solutions which are meant to correct these anomalies.

**A) Nursery:** Efforts shall be made to make quality nursery education free and available to our people across the country in preparation towards entry into primary schools.

**B) Primary:** Universal free primary education will be continued and consolidated. (Distribution of free pencils, pen, uniforms, books e.t.c. would be considered). In addition to making the pupils literate, education at the primary will be made more relevant to our social situation. The primary school curriculum will be revised to include studies that will make pupils appreciate the importance of agriculture and good behavioral ethics in modern development.

The physical environment our primary schools will be upgraded so as to make them conducive to learning and to the inculcation of appropriate social and cultural values in the young. Sports shall be encouraged in all primary schools.

**C) Secondary:** The National Rescue Movement shall make secondary school education free to all children who have completed the primary level in all NRM controlled states. Sports and Civic activities shall be encouraged in all our secondary schools.

**D. Vocational:** NRM controlled state governments shall embark on a programme of free vocational education as a means of harnessing the special talents of children Who may Wish to concentrate on these special fields early enough so that, specialisation could be encouraged.

**E. Post-Secondary:** In all the NRM controlled states, post-secondary- education shall\_ be tuition free for all citizens in fulfillment of our conviction that education to any level is an indispensable right of every citizen and not a privilege.

Existing Technical, Colleges, Polytechnics, Colleges of Education and State Universities shall be-expanded while new ones shall be established in states that lack such. In addition, bursaries will be considered for the indigent indigenes of the state concerned in order to assist in meeting some of their incidental expenses and institutions will be provided with adequate funds and facilities for teaching and research, particularly in science and technology.

Science laboratory will be a compulsory -feature of all secondary and post-secondary institutions in all NRM controlled states. In addition, all post-secondary institutions will be required and oriented to provide service to their relevant communities particularly with regards to agricultural needs as well as in the area of adult education which is considered as crucial as other types of educational programmes.

Teaching service: The NRM recognises that teachers are the pillars upon which the educational system rests. The party THEREFORE BELIEVES that it is in the overall national interest that teachers should be made to feel happy at their job.

Accordingly, ever NRM government will ensure the payment of appropriate and worthwhile salaries and emoluments of all teachers throughout its jurisdiction. To achieve this critical objective, the NRM plans to make adequate grants and funds available for this specific purpose.

The practice of keeping teachers in schools when the pupils are away on holidays is obsolete and should be discouraged. Under NRM governments, teachers will also go on holiday at the same time as their students. This system will make for healthy uniformity in the leisure and study/teaching period of both the teachers and the children under their charge.

All loans and grants-in-aids given for purpose of scholarship and academic development shall be written off by NRM governments.

Furthermore, the National Rescue Movement is very much aware of the current decay in the educational, skill and technology sector in the country at all levels. The decay is now evident in the results of WAEC/NECO students, as well as in poor quality of work done by artisans and technicians on a daily basis. Many of our-school leavers are unable to meet the standards of the modern workplace because of inefficient education system. It is increasingly becoming difficult and near impossible to expect that private schools that are springing up across the country today can solely provide adequate knowledge and skill needed for national transformation and development governments, will intensify efforts towards uplifting the standards and quality of education at all levels.

Over 60% of Nigeria's population is under 35 years of age. This demographic situation requires the attention of all tiers of government to develop and increase the capacities of these young Nigerians by equipping them with the knowledge and skill they need to empower themselves and to contribute purposefully and productively to the development of the country, In the education, skill and technology sector, we will set up new priorities accordingly by:

- \* Modernizing and upgrading the public school system
- \* Make quality public school education available to every citizen
- \* Provide lifelong learning and welfare opportunities for serving and teaching others
- \* Increase access of school and university students to modern learning resources
- \* Establish national programmes in academic quality assurance in public and private primary and secondary schools through efficient education inspectorate scheme to be staffed by professionals and retired teachers
- \* Fund public tertiary institutions at the level that meets international standards to enable them provide teaching and research that can fuel rapid national development and transformation.
- \* Provide special incentives for applied research in tertiary institutions to generate local solutions to development problems and challenges
- \* Encourage collaborative research projects between Nigerian and overseas institutions
- \* Encourage states and local governments to establish skill development schemes that can provide appropriate modern workforce for the country's formal and informal sectors.

## CHAPTER EIGHT

### LABOUR AND EMPLOYMENT GENERATION

Full employment and Social Security is another cardinal programme of the National Rescue Movement. In order to **achieve** progress in the social welfare and security of Nigerians, adequate support programmes must be put in place to support the unemployed graduates, youth, women, market people, the elderly, the children, the physically and mentally challenged people.

The NRM states governments shall make spectacular achievements in the area of employments through the areas of industries, road Works, irrigation, public services, local governments, parastatals, social and educational institutions among other activities – these efforts if well managed can surely go a long way in providing gainful employment for employment-ready Nigerians.

In addition, every NRM government will apply its much greater financial capability in such a manner as to achieve, for a start a much-reduced level of unemployment in the country. Deliberate opportunities will be created for the employment of school leavers particularly university graduates and others with technical and technological qualifications.

A situation where qualified school leavers have to roam around offices and factories in vain as they do today in search of jobs that are not just available is most intolerable. This situation has the likelihood of constituting a potential threat to national security. To stem the growing tide of unemployment rate that is now over 50% among the general population and much-worse among the youths, the party is poised to embark on the following initiatives in pursuance of the full employment agenda:

- \* Change School Curriculum to include training modules in business and entrepreneurship.
- \* Provide special incentives for youths to participate in agricultural settlement scheme through credit facility and land allocation.
- \* Establish agricultural extension to each local government
- \* Provide special funding for organic and green farming through application of relevant technology.

\* Come up with creative, productive and sustainable plans, policies and projects that can import commercialization and social enterprise-into all the sectors and sub-sectors of the economy for the purpose of dynamically driving the human resource endowment of the nation.

\* It is particularly important to note that agriculture provides employment for about-70% of the population in Nigeria and it is a major source of industrial development and economic prosperity. It is a generally accepted position that agriculture is not only meant to be the spine or pillar of the economies in Africa, it is also reckoned to be a major source of employment generation including its multiplier effect on the socio-economy. Nigeria, regrettably, is not deploying this opportunity to ensure employment security for its citizens.

The global attention that the agricultural sector commands in recent times, particularly with the recent world food scarcity threat, underscores the importance of self-sustenance in respect of food security. There is need for special intervention in the agricultural sector so that it- can become a veritable source of sustainable employment generation. The reason for this special effort is to create opportunity for the teeming army of unemployed youths in the country to be engaged productively.

A strong and efficient agricultural sector has the potential to enable a country feed its growing population, generate employment, earn foreign exchange and provide raw materials for industries. The vibrancy of the sector has a multiplier effect on every nation's socio-economic and industrial drive, because of its multifunctional nature and multi-dimensional processes and effects.

## **CHAPTER NINE**

### **SUSTAINABLE ECONOMIC AND INDUSTRIAL DEVELOPMENT**

Since independence, there have been different rolling plans put in place by successive governments which are purportedly aimed at ensuring socio-economic stability through macro-economic activity which is meant to generate micro economic prosperity, or so the development experts must have believed. But events over time since Nigeria secured her independence from the colonizers have put a very big lie to this as both the Nigeria people and the Nigerian nation have continued to suffer from aggravated penury and unrelieved impoverishment.

Experience has taught Nigerians in a very harsh way that all the development blueprints that have been used to beguile Nigerians were not worth the papers they were printed on just like all the visions conceived to turn potentialities into opportunities have lacked the foresight needed for envisioning. The result, therefore, is a nation that is crudely locked in the vicious and perilous circle of stagnation and sometimes retrogression which is fuelling the fire of insurgencies and arming the bomb of a revolution. To stop this further slide into the abyss and put back the country on the path of prosperity, the NRM government is poised to deploy innovative and engaging plans and modalities through the ' socio-economic engineering for the revival of the ailing economy that is in perpetual recession.

1. The first thing that must be done to activate any economy is to put plans in place that will address the immediate needs of the people and bring them back to the side of contentment from the threshold of frustration and hopelessness through socially impacting and life changing projects and programmes which must focus on the citizenry and their welfare.
2. Necessary and required infrastructures must be put in place to reduce the pressure on the people and enhance their survival level so as to invigorate them to achieve their welfare aspirations and reduce unnecessary distractions in their quest for better life and prosperity.
3. Accurate policy administration and appropriate institutional frameworks must be firmly set in place to facilitate, enhance and accelerate entrepreneurial conditions and investment atmosphere that are required and conducive' for friendly business development and sustainable economic growth:
4. Efforts must then be made to develop, train and empower all employable persons within the society so that they could generate the ability required to add value to the society by becoming productive assets rather than remain liabilities that would not only continuously take away from the society, but would continue to diminish the prospects and prosperity of the commonwealth.

The National Rescue Movement has already designed a comprehensive master plan that will make the realization of this objective a reality within a global record time that will dwarf the wonders of China & the enchantment of Dubai.

In accelerating the growth of Nigeria, the NRM will deploy the use of the government budget to promote economic development and stability through the provision of basic infrastructure like roads, bridges, health, water and sanitation, education, public security and other public utilities. The nature of these goods is such that they cannot be provided efficiently by the private sector partly because of their high cost of production and partly because they are mostly social services.

Consequently, the government will step in by creating a dynamic, practical and progressive platform for public-private participation and partnership for prosperity which will unleash the limitless potentials of the private sector capacity. The NRM will make sure that all the governments under its control in the country is engaged fully in engineering or re-engineering the country's development process in the direction of prosperity for all Nigerians. The National Rescue Movement cannot claim ignorant of the subsisting scenario where commercial houses and petty traders alike are being haunted by governments' extortionist tendencies, hunted by needless and sometimes mindless bureaucratic policies, and are generally being hampered by too many laws, bans, restrictions, unfair tariffs, unjust taxation and the punitive withholding of licenses among other executive derelictions. Besides, certain Government measures have deliberately been directed towards the build-up of a monopoly cadre mainly drawn from a kind of closed-shop feudal class of friends, cronies and hangers-on. The NRM pledges to reverse this deplorable and dishonorable trend by:

1. Provision of massive, functional and human-friendly markets and shopping centers of all cadres and dimensions across all NRM jurisdictions that will be made available to the generality of our people without discrimination and undue patronage at unprecedentedly low rates. Many of these facilities will come with social services that will make them conducive to optimal use like creches, mini clinics, security points, tire services among others.
2. Review all the taxation policies that are obviously punitive and have almost turned our people into beggars and slaves in their own country. The NRM cannot fathom how the majority of our people who can hardly earn enough to feed their families are still being expected to give back big chunk of their salaries into the coffers of governments that do

not care about them but routinely compound their problems. If our people experience and feel responsibility on the parts of governments, they would not be forced to give back to the society.

## **Industry**

There can be little doubt that virtually all of Nigeria's efforts directed at industrial development are dependent on external participation and intervention, not just at technical level, but even in the area of management and funding. The indigenization policy for which Nigerians are supposed to hold controlling equity in big business and industrial establishments has become a farce.

The NRM will pursue a fruitful policy of industrialization based on effective indigenization. The party shall collaborate, engage and negotiate with all expatriate interest and other stakeholders to ensure the guarantee of national economic and technical interest. Furthermore, the Nigerian people will be encouraged to set up industries using internal inputs and local raw materials while maintaining the standard that can compare to products from the best places across the world.

Indigenous scientists will also be encouraged to set up industries using local inputs and raw materials. They will further be mobilized to create research centres to look into how best to develop local resources and materials while inventing best manufacturing processes and practices that are possible within the Industrial World.

In order to build a secure industrial base upon which to rest the construction of heavy and machine tools industries, the National Rescue Movement will encourage and facilitate the speedy completion of all Iron and Steel projects in the country in accordance to a fast-track time-table.

In addition, petro-chemical industries, with special emphasis on fertilizers and drug production will be encouraged and established. Efforts will be made, and policies put in place to guarantee favourable climate for foreign investments and fair opportunity created for investors to repatriate their profits without any hitch at the time of disengagement.

At the same time, the NRM shall ensure that foreign capital investment is tied to the need for the adequate training of indigenous managerial and technical manpower. This will enable our people to venture into areas of sophisticated industrial processes.

The NRM government shall also put a stop to the culture of mono- economy that past governments have been running while other equally viable sectors have been abandoned and are falling or wasting away.

One of the first acts of this party on assuming the presidency will be to set up machinery for the various diversification of the national economy. This is with a view to bringing to permanent end the frustrations and deprivations that make poverty and penury the greatest danger to the existence and survival of the masses of our people.

We are of the view that the bane of the Third World lies in the failure of their governance to so structure the economy as to promote political and socio economic stability. The NRM therefore has decided to re-order and modernise the economy by giving immediate and priority attention to feasible and exploitable strategic sectors.

Indeed, an NRM Federal Government will immediately set aside adequate fund for a resolute scheme of converting every Nigerian village into a modern cooperative scale.

Groundnut pyramids, palm oil drums and mounds of cocoa bags will once again become a common feature in the economic equation of the nation.

### **Uncoordinated development plans**

Nigeria has had several development plans since independence. But none has answered to the, increasing needs of the people. It is therefore futile and deceptive to continue to talk of any vision without landmark achievements to point in the way of actual development. The milestones of development are social security, provision of standard relevant infrastructures and a largely protected citizenry. Without these things in place, all the visions will remain daydreams and therefore cannot be attained.

But the NRM will not engage in any visionless propaganda put together to deceive the unsuspecting Nigerian people. The economy can work and the National Rescue Movement shall make it work.

## **CHAPTER TEN**

### **YOUTH, GENDER AND HUMAN RESOURCE DEVELOPMENT**

The marginalisation of women and youths in the polity also denies the country of the full benefits of contribution of over 80% of its population. The NRM will give special attention to ensuring through relevant legislation that Nigeria returns to a management system that promotes strong centre, strong states, and strong local governments and ensure through electoral reforms that only people elected by the citizens occupy executive

and legislative positions in the three tiers of government. More specifically, we will do the following: \_

- \* Enforce all legislations that support the politics of inclusion that reserves a minimum of 35% of members of executive, legislative, and judicial branches of government for women to fast-track the integration of the female gender into all areas of leadership in the society.
- \* Support new legislation to reserve at least 15% of offices in executive and legislative branches of government for citizens between 25 and 35 years of age.
- \* Promote and propagate electioneering education and enlightenment campaigns that would seek to intellectually enrich and empower the Nigerian people.
- \* Extol and explore the virtue of internal democracy in the nomination of candidates into public offices.

## **CHAPTER ELEVEN**

### **FINANCE AND REVENUE GENERATION**

The finance and revenue generation capability of governments and their agencies remains as largely pedestrian and unimaginative. Today, across the country, taxation is mostly punitive and extortionist. The leaders in government are ostensibly lacking in creativity, imagination and compassion, and they are therefore comfortable with imperialist and colonialist agenda of systematic disempowerment of the people to empower their own caprices.

The National Rescue Movement shall review, repeal or completely abrogate obnoxious law and enactments that are hostile to the interest of the Nigerian people. Taxation and all other moneymaking regimes must no longer be oppressive and unbearable for the people. The NRM will come up with innovative ways to generate income for the use of the state. The party shall not take taxes from people to plant flowers and build facilities and embark on projects that do not add any direct benefit to the lives of our people.

## **CHAPTER TWELVE**

### **SUSTAINABLE INTEGRATED DEVELOPMENT SCHEME**

This strategic urbanization projects are designed towards the creation of new functional communities with up-to-date facilities in villages, towns and cities across the country in an integrated and wholesome way by attracting the population to development rather than

take development to the population which is more cumbersome and financially demanding.

Under this scheme, all other sectors, areas and industries shall be well considered and taken care of using the simple process of Sector Development Template by:

1. Looking critically at the obtainable situation in the relevant sector while comprehensively assessing it to determine its functionality, serviceability and challenges.
2. Locating the causes of the challenges that are identifiable within sectors and areas and involve relevant communities in determining their needs and the implementation of Government programmes for their communities.
3. Taking stock of the result and impact on our people and their welfare across the country or in the respective areas of the sectors operation.
4. Defining the emerging expectations and aspirations of our people as they concern and affect the interest and welfare of the people.
5. Designing the modalities, ways and means to resolve the located challenges that are undermining the smooth service delivery of the sector.
6. Determining the human, programmatic and financial resources required for the dynamic and game-changing intervention envisaged by our great party. -
7. Closely device the where withal of generating social enterprises out of the sector to make way for the commercialization and sustainability of the sector under review.
8. Draw up operational timelines for the successful realization of the vision from the time of taking over power at any level of government in the country so that the expectation of the people can be time-bound while putting the leaders of the party under pressure to deliver good services to the ultimate delight of our people.
10. To conduct regular review of the process for the purpose of increasing productivity and improving service.

**Some of these specific areas shall include:**

Environmental and Physical Development; Natural Resources (Human, Oil and non-oil); Tourism and Resort; Sports and recreation; Religion and Morality (internal persuasions); Geography and physical properties; Political and social relations; Geography and Physical properties; Tradition and custom; Leadership and governance; The Niger Delta Conundrum; Ethics, religious and social insurgencies; Institutional corruption; The Diaspora anxieties, Tenures of Political Offices; Inflation and Politics of wage increase; Dialogue between revolution and evolution; Constitutional and regional agitation;

Poverty and international aids; National Pride and Ethics; The Elite and National agenda; Executive oppression and lawlessness among other issues and concerns.

## **CHAPTER THIRTEEN**

### **GENERAL ISSUES**

**New State:** The NRM uncompromisingly support the creation of new state in so far as the proposed states and communities are viable and they satisfy the relevant parts of the constitution.

The NRM is in favour of equal treatment in the national assembly, for all state movements. Importantly, the NRM is proposing that the federal government should take every possible measure in order to speed up the process of state creation.

The present foot dragging in the national assembly will achieve nothing except to frustrate the minority elements of our country and others whose inalienable right to self-determination is clearly provided in the constitution.

The NRM is of the opinion that these rights must not be trampled upon.

**Corruption:** Nigeria is known at home and abroad as one of the most corrupt countries in the world. Nigeria is known as one country that has tailed not for lack of resources, adequate manpower and required demographic dividend, but for its culture of corruption that has arisen from lack of good leadership in public office including the executive, legislature and the judiciary. NRM is committed to transforming the political culture of the Country and growing new crop of leaders with above-average public and personal morality. To this end, the party will embark on the following. ,

- \* Strengthen existing anti-corruption institutions by providing special support for speedy investigation and prosecution.

- \* Support collaboration between anti-corruption agencies to participate in anti-corruption activities in all states and local governments.

- \* Establish special courts to handle cases of corruption. Prevent individuals with dubious character and questionable integrity from qualifying to run for offices in our party in the three tiers of government under the banner of our party.

- \* Strengthen electoral laws to ensure free and fair elections in all tiers of government,

\*Adhere strictly to the ethics required of public officials as enshrined in the constitution and other statute books.

**Cultural Agenda:** Culture is an indispensable aspect of political and economic development. In federal multi-ethnic and multi-religious societies; governments at federal, state, and local levels must have a cultural policy that is capable of enhancing the unity of people of diverse cultures while respecting the autonomy of each culture. Examples of government sensitivity to cultural diversity abound in Canada, Belgium, Switzerland, Ethiopia, and in today's largest federal multiethnic system, the European Union. The NRM will develop policies that will remove inter-ethnic fear and suspicion and replace this with inter-ethnic cooperation and tolerance.

The Freedom of Information Act shall be given a new impetus of implementation.

To this end, the freedom of the press shall be stoutly defended by the party. The party on getting to power shall for this purpose repeal and make redundant all legislations which tend to gag the press.

Furthermore, we shall introduce enactment which will make it unlawful for the police and other national security agencies to arbitrarily raid media houses and institutions, and harass journalist on charges connected with their professional duties and obligations.

### **External Affairs**

The NRM will pursue most vigorously all political, economic and social programmes which in relation to rest of the World, are calculated to be in Nigeria's national interest and the stability to the World at large. The NRM will embark on dynamic international policies which promote the greatness and glory of West Africa, and the World at large.

A NRM federal government will continue to give support to the United Nations and to other relevant regional, sub-regional; specialized and peripheral organisations whose activities are directly or indirectly incidental to the realisation of the agenda of a greater and more prosperous nation in a more peaceful and stable World.

We shall continue to maintain friendly relations with all countries and refrain from acts likely to undermine our policy of nonalignment

## **EPILOGUE**

In summary, the following points shall be the focal points of the government of NRM, when voted into power at any level:

- ❖ To inculcate decent, selfless service and patriotic culture in Nigerian politics.
- ❖ To inject new blood into Nigerian politics to facilitate the achievement of the welfare and security of the people.
- ❖ To steer the course of Nigerian politics towards socio-economic and political emancipation of Nigeria.
- ❖ To sensitize, mobilize and assist the Nigerian youth for self-reliance and self-employment as part of efforts in curbing the rate of unemployment, and youth restiveness in the Country.
- ❖ To revolutionize, modernize and incentivize agriculture, especially dairy farming as a solution to cattle rustling, herdsman-farmers' clashes and related crimes.
- ❖ To create a new socio-economic and political order to awaken the dormant potentials of the Nigerian people and harness the nation's human and natural resources for national development.
- ❖ To incentivize and strictly regulate Solid mineral mining in the Country as a major step in diversifying our Economy.
- ❖ To relate and dialogue with Niger Delta restive Youth and Militants with a view to bringing an end the Niger Delta socio/economic crisis.
- ❖ To diligently address the immediate and remote causes of Boko Haram and related crimes to bring permanent solution them.
- ❖ To introduce novel measures and strategies to enhance the Nation's internal security.
- ❖ To co-operate and collaborate with neighbouring African and other foreign Countries to solidify and enhance our external security.
- ❖ To give attractive incentives to the manufacturing Sector in order to encourage massive local production of economic goods and rehabilitate comatose industries and improve Nigeria's balance of trade.
- ❖ To co-operate and collaborate with international Trade System in order to guarantee a prominent position as a key player in International Trade by leveraging on our comparative advantage of population.

- ❖ To introduce Diplomatic Week which holds annually to discover more trade opportunities and attract direct foreign investments.
- ❖ To introduce National Cultural Week where the Nation's arts and culture will be showcased to the World to make our tourism industry vibrant and attractive.
- ❖ To introduce Industrial Week where locally manufactured goods including machineries and the Nation's talents will be exposed to Africa and the World to attract market in Africa and other parts of the World.
- ❖ To review existing regulations and introduce measures to ease the clearance of goods at the Ports.
- ❖ To review Land Use Act so as to enable administration of land titles to ease access to land and facilitate local and foreign loanable funds.
- ❖ To review Nigeria's financial and monetary system to respond appropriately to local and international emerging challenges.

All these, the National Rescue Movement shall strive to do and achieve to the glory of God and to the delight of humankind through the irreversible commitment of its entire leadership and membership.
